Comments:  
To: Ron Pauer, Lawrence Berkeley National Laboratory  
From: Pamela Evans, Alameda County  
Public/Environmental Health Departments  
Subject: Environmental Sampling and Community Concerns  
Date: April 5, 2001

Here are my comments on LBNL's environmental sampling:

1. I appreciated Owen Hoffman's explanation of the air modeling results and how these exercises affected the redeployment of air monitoring station around the NTLF.
2. I support Michael Rochette's request (Regional Water Quality Control Board representative) that the groundwater pathway be evaluated either as part of the HRS process or supplementary to it.
3. I also support Mr. Rochette's request that the RWQCB be kept closely informed regarding the removal of the hillside stack and the associated exhaust system, as well as any contaminant investigation and clean up that occurs as a result.
4. I am requesting that LBNL work with members of the task force to quickly resolve how information about the timing of tritiation work can be made available in such a way that it can be correlated to stack emissions and other environmental sampling data.
